DETAILED ACTION

1. This Office Action is response to Applicants' Response to After Final filed on 04/26/2005.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patrick J.S. Inouye, Esq. (reg. No. 40,297) on 05/16/2005.

The application has been amended as follows:

The first line of claim 1, "A system for analyzing unstructured documents" please rewrite as "A computer-implemented system for analyzing unstructured documents"

The first line of claim 9, "A method for analyzing unstructured documents" please rewrite as "A computer-implemented method for analyzing unstructured documents"

The first line of claim 18, "A system for dynamically evaluating latent concepts" please rewrite as "A computer-implemented system for dynamically evaluating latent concepts"

The first line of claim 18, "A method for dynamically evaluating latent concepts" please rewrite as "A computer-implemented method for dynamically evaluating latent concepts"

3. Claims 1-44 are allowed.

Allowable Subject Matter

4. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 1-44 are allowed in light of the applicants' argument and in light of the prior arts of made record.

5. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a system and method for analyzing unstructured documents and evaluating concepts in unstructured documents. A multiplicity of concepts is extracted from a set of unstructured documents into a lexicon. The frequency of occurrence representation is created for the documents set and provides an ordered corpus of frequencies of occurrences of each concept, a group of weighted clusters of concepts selected from the concepts subset is generated and a matrix of best fit approximations is determined for each document weighted against each group of weighted clusters of concepts.

The closest prior arts, US Patent No. 5,510,406 of Marchisio teaches adding a new row to the term-document matrix for each phrase in the user query. The term-document matrix grows, row-by-row, based on the phrases occurring in the user query. And US Patent No. 6,701,305 of Holt teaches evaluating a score vector to determine the relative performance of the documents against the user query. The documents to return to a user are selected in a variety of methods typically by returning the best scoring documents identified, by applying a threshold to the individual scores, by taking a fixed number in ranked order or by statistical or clustering techniques applied to the scores. In combination, Marchisio and Holt both fail to teach "a subset of concepts out of the frequency of occurrences, grouping one or more concepts from concepts subset, assigning weights to one or more clusters of concepts for each group of concepts, a best fit approximation for each document weighted against each group of weighted clusters of concepts".

These distinct features, in conjunction with all other limitations of the dependents and independent claims render claims 1-44 them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
